## Features of the **LASCO** Reverse Osmosis System

- 4 & 5 STAGE FILTRATION AND PURIFICATION PROCESS FOR WATER
- INCLUDES ALL FITTINGS, TUBING, & FAUCETS FOR EASY HOOK-UP •
- IMPROVES QUALITY & TASTE •

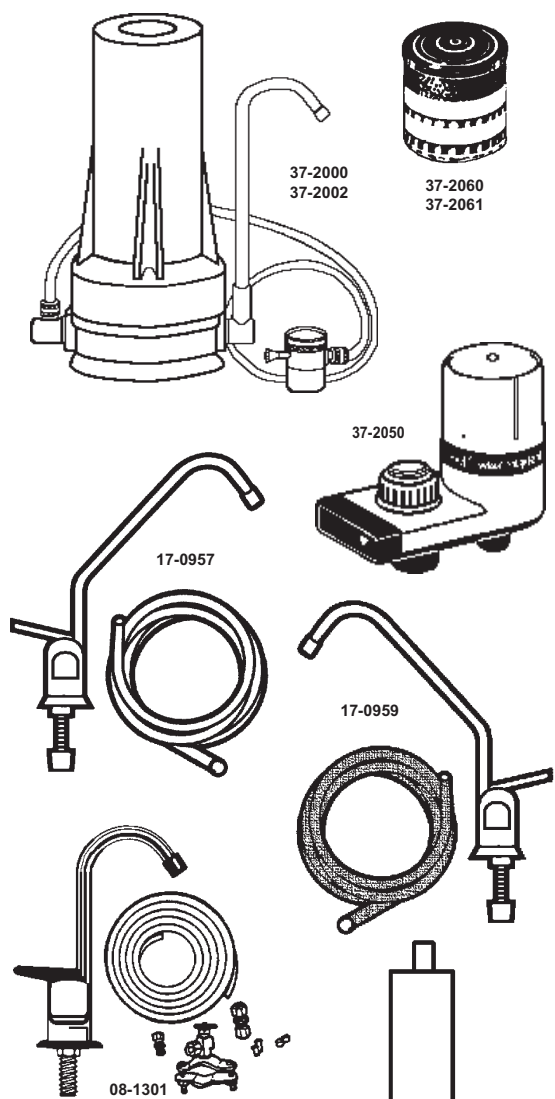

- 1 5-MICRON SEDIMENT FILTER THAT TRAPS DIRT, RUST, AND SAND PARTICLES
  - 2 CARBON PRE-FILTER REDUCES MOST ORGANIC MATERIALS, SUCH AS CHLORINE, BAD TASTES, AND ODORS FROM THE WATER. THE REVERSE OSMOSIS SYSTEM PRE-FILTER CONTAINS CARBON, ALLOWING EXTRA FILTRATION AND EXTENDING THE LIFE OF THE RO MEMBRANE.
  - 3 THIN FILM COMPOSITE (TFC) SEMIPERMEABLE MEMBRANE SEPARATES THE PURIFIED WATER FROM THE REJECTED IMPURITIES, UP TO 96% OF ARSENIC, LEAD, FLUORIDE AND DISSOLVED SOLIDS, WHICH ARE FLUSHED FROM THE MEMBRANE AND DISPOSED DOWN THE DRAIN.
  - 4 FINAL STAGE CARBON FILTER - FINAL FILTRATION STAGE FOR FURTHER REDUCTION OF MATERIALS FROM THE WATER TO ENHANCE THE FINAL TASTE.
- ▶ AUTOMATIC SHUT-OFF VALVE - WHEN THE STORAGE TANK HAS REACHED CAPACITY, THE AUTOMATIC SHUT-OFF VALVE STOPS THE FLOW OF WATER ENTERING THE SYSTEM, THEREBY CONSERVING WATER. AS WATER IS DRAINED FROM THE STORAGE TANK, THE FLOW IS ALLOWED TO RESUME THROUGH THE SYSTEM. THIS CYCLING PROCEDURE WORKS AUTOMATICALLY BY THE WATER PRESSURE.
  - ▶ OPERATES ON 40 PSI TO 85 PSI WATER LINE PRESSURE.
  - ▶ STORES UP TO 3 GALLONS OF PURIFIED WATER.
  - ▶ PRODUCES ENOUGH PURIFIED WATER FOR AN AVERAGE FAMILY'S DAILY USE.

# JOHN GUEST PUSH-IN FITTINGS

GREY ACETAL COPOLYMER • GOOD FOR PRESSURE (AIR) UP TO 150 PSI  
USE ON POLYETHYLENE, BRAIDED, OR SOFT COPPER TUBING

## HOW TO MAKE A CONNECTION

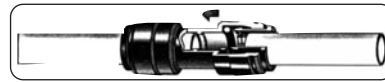

To make a connection, the tube is simply pushed in by hand; the unique patented JOHN GUEST collet locking system then holds the tube firmly in place without deforming or restricting the flow.

### 1 Cut tube square

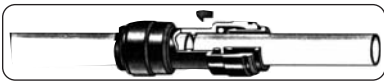

Cut tube square. It is essential that the outside diameter be free of score marks and that the burrs and sharp edges be removed before inserting into fitting.

### 2 Insert tube

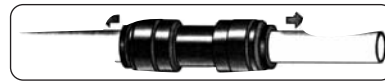

Fitting grips before it seals. Ensure tube is pushed into the tube stop.

### 3 Push up to tube stop

Push the tube into the fitting, to the tube stop. The collet (gripper) has stainless steel teeth which holds the tube firmly in position while the "O" ring provides a permanent leak proof seal.

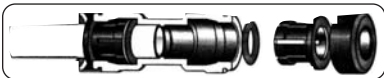

### 4 Pull to check secure

Pull on the tube to check that it is secure. It is good practice to test the system prior to leaving the site and / or before use.

## DISCONNECTING

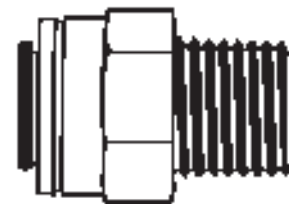

Push in collet and remove tube

To disconnect, insure the system is depressurized before removing fitting. Push in collet squarely against the face of the fitting. With the collet held in this position, the tube can be removed. The fitting can then be reused.
